

INTERMAP[®]

Solutions on Demand[™]

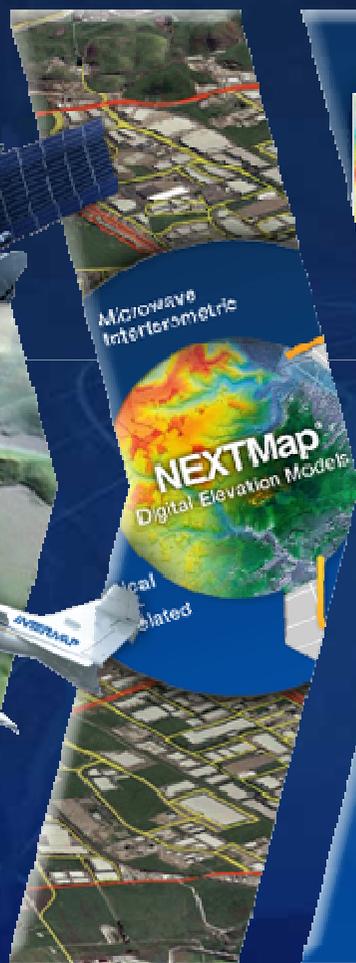

Intermap is a provider of software, services and solutions that help businesses and governments solve their geospatial challenges.

Intermap's five centers of excellence

Acquisition

Production

Aggregation

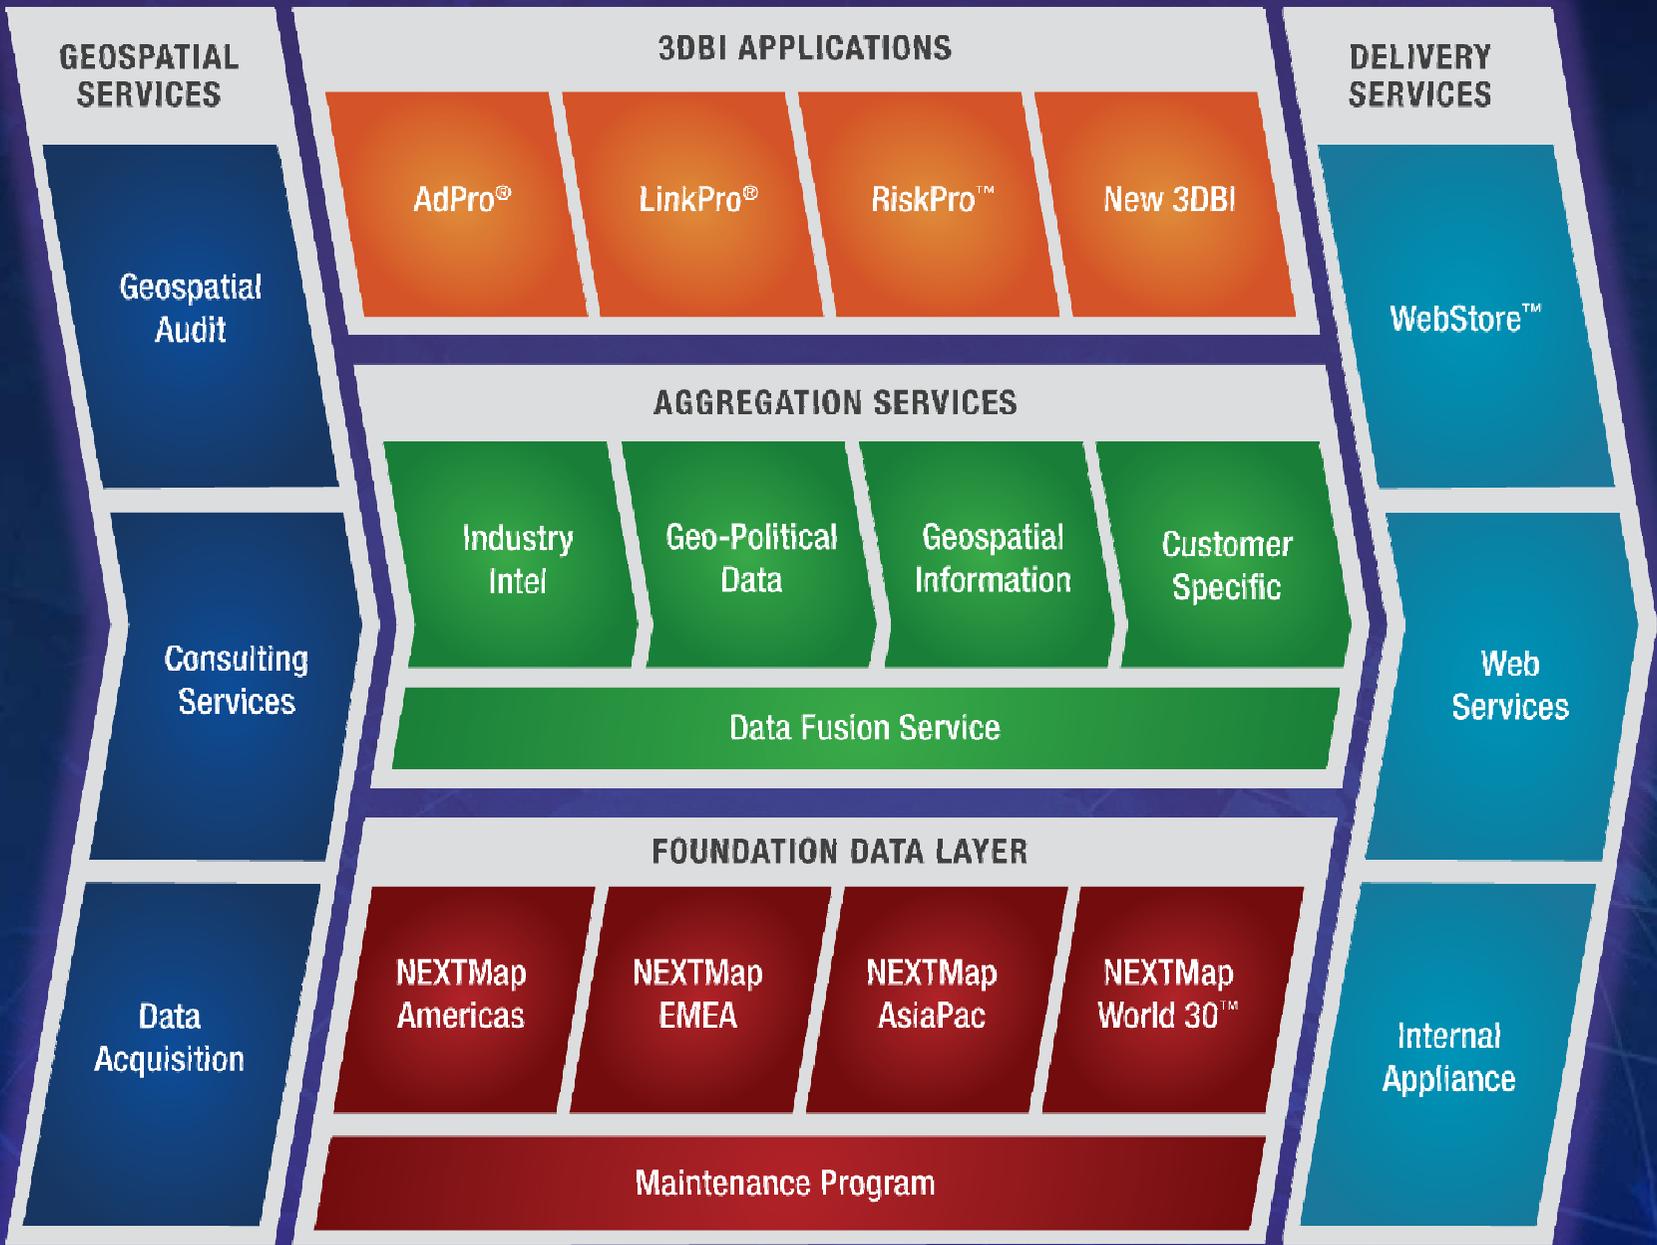

Applications

Distribution

INTERMAP

Data Fusion

- Integrate multiple elevation datasets of differing resolutions and specifications into one homogeneous, consistent specification
- Receive a fused elevation dataset more accurate and useful than the individual input elevation datasets are alone
- Fill gaps where your data is limited

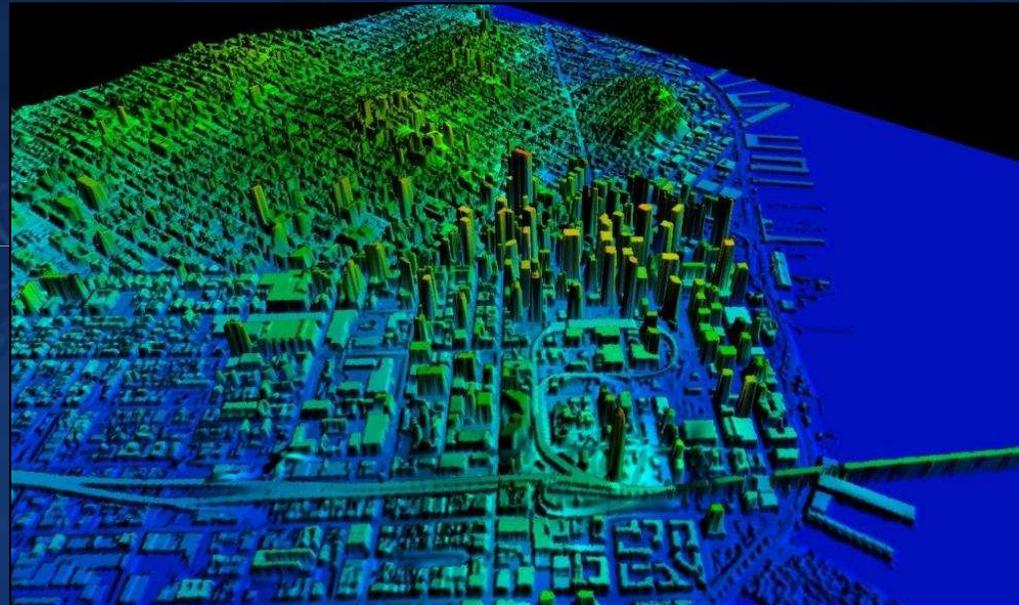

Data Fusion – Overview

Using the highest resolution data available, our Intermap's engineers:

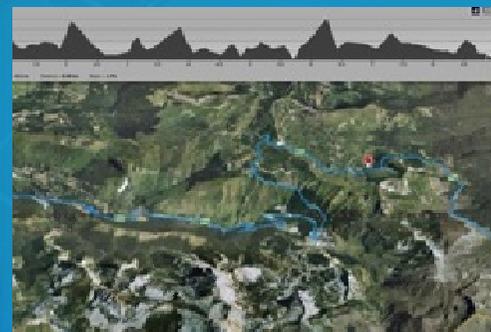

- Aggregate
- Validate
- Align
- Fuse
- Normalize

your datasets to a consistent and common terrain elevation model.

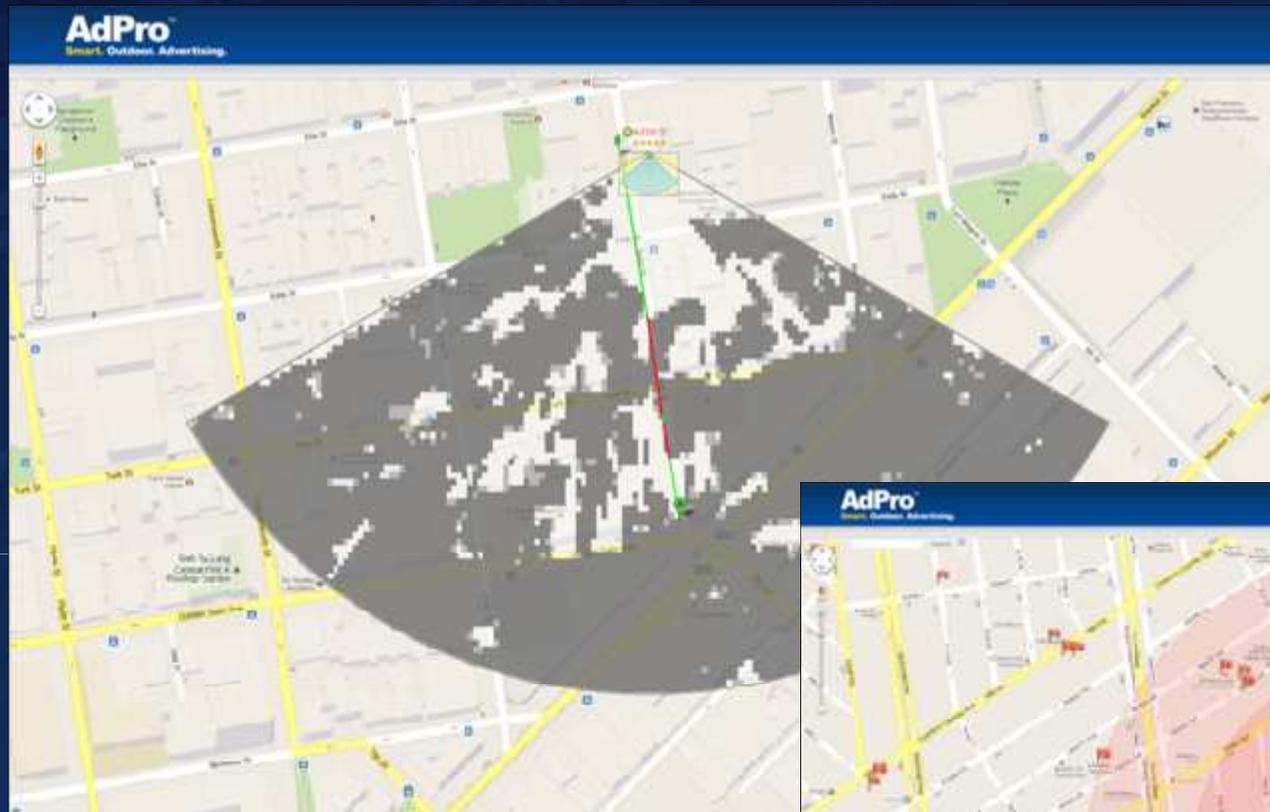

3D Business Intelligence Applications

- 3DBI is analytics derived from NEXTMap database
- Disparate data is aggregated into information to provide a market point solution
- Delivered via SaaS model

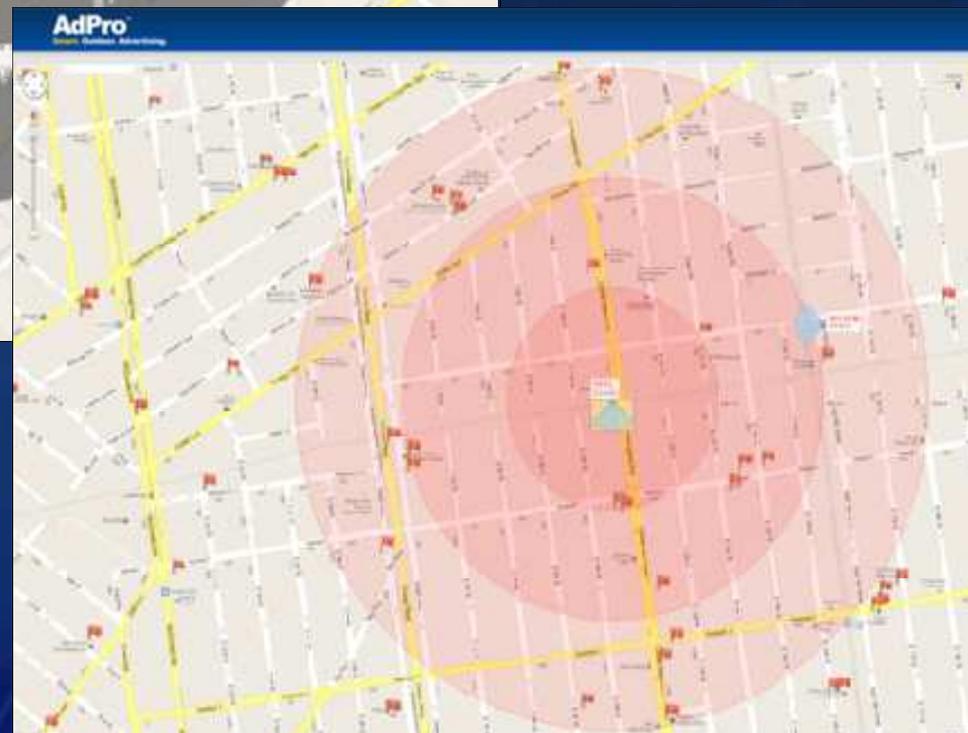

AdPro™: Three Patents Pending

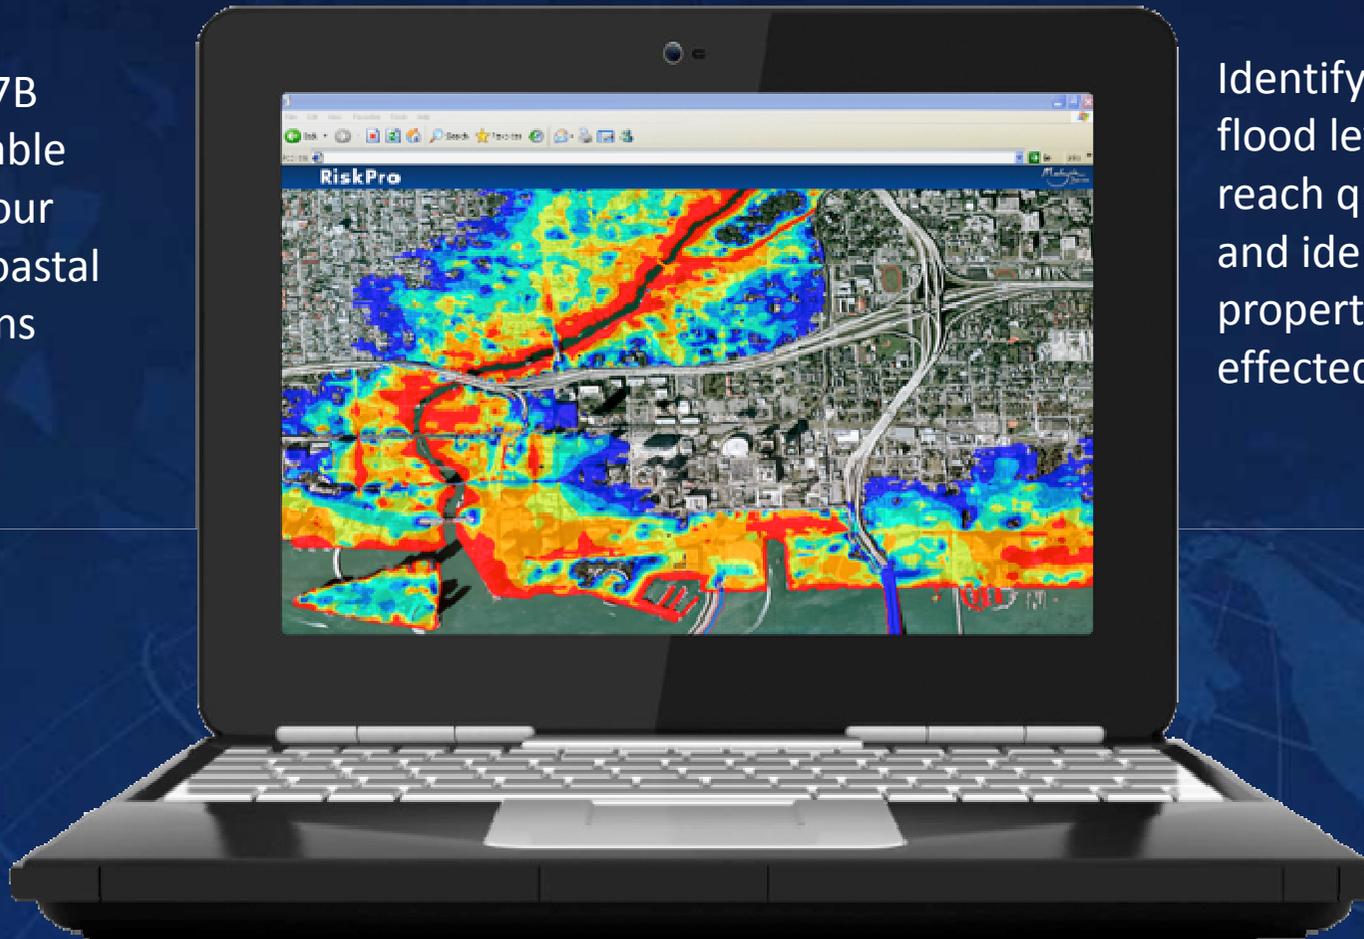

Developed industry's first exposure metrics for outdoor advertising

Developed industry's first proximity tool

RiskPro™ Is our Newest 3DBI Application

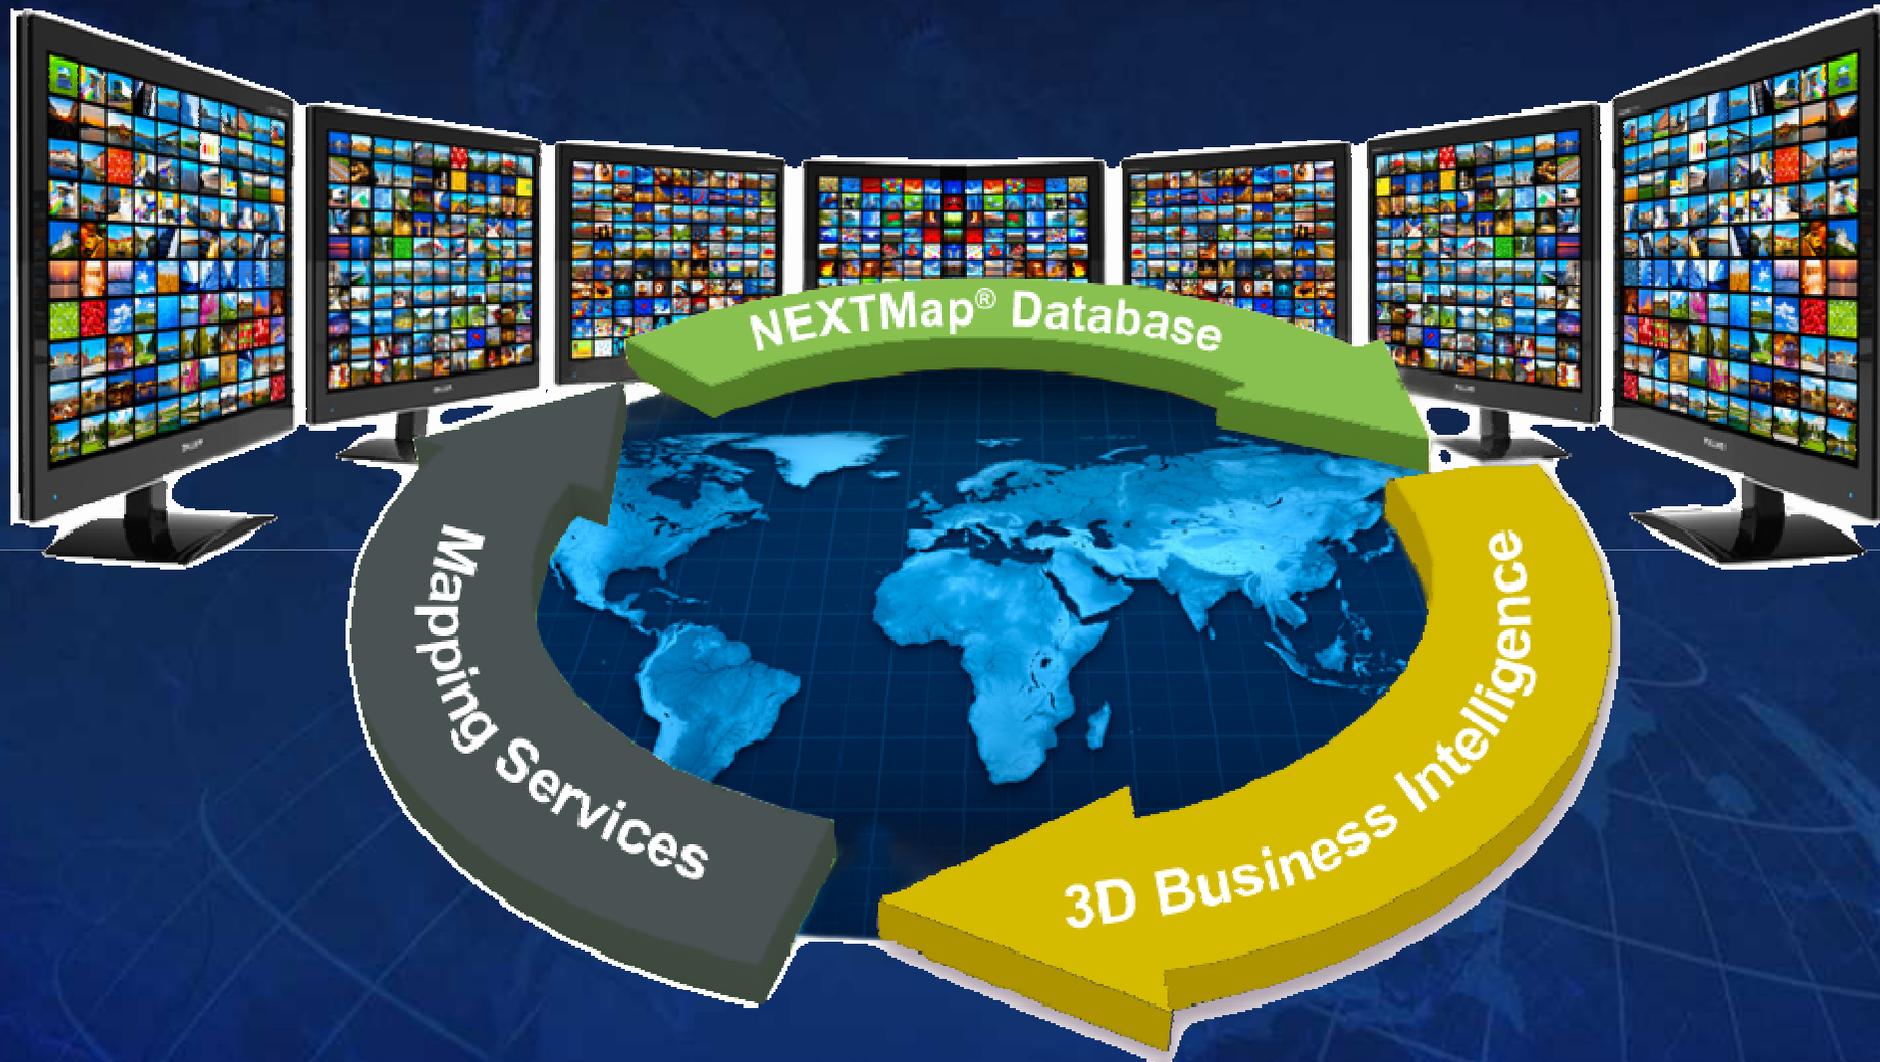

Over \$527B
of vulnerable
assets in our
nations coastal
flood plains

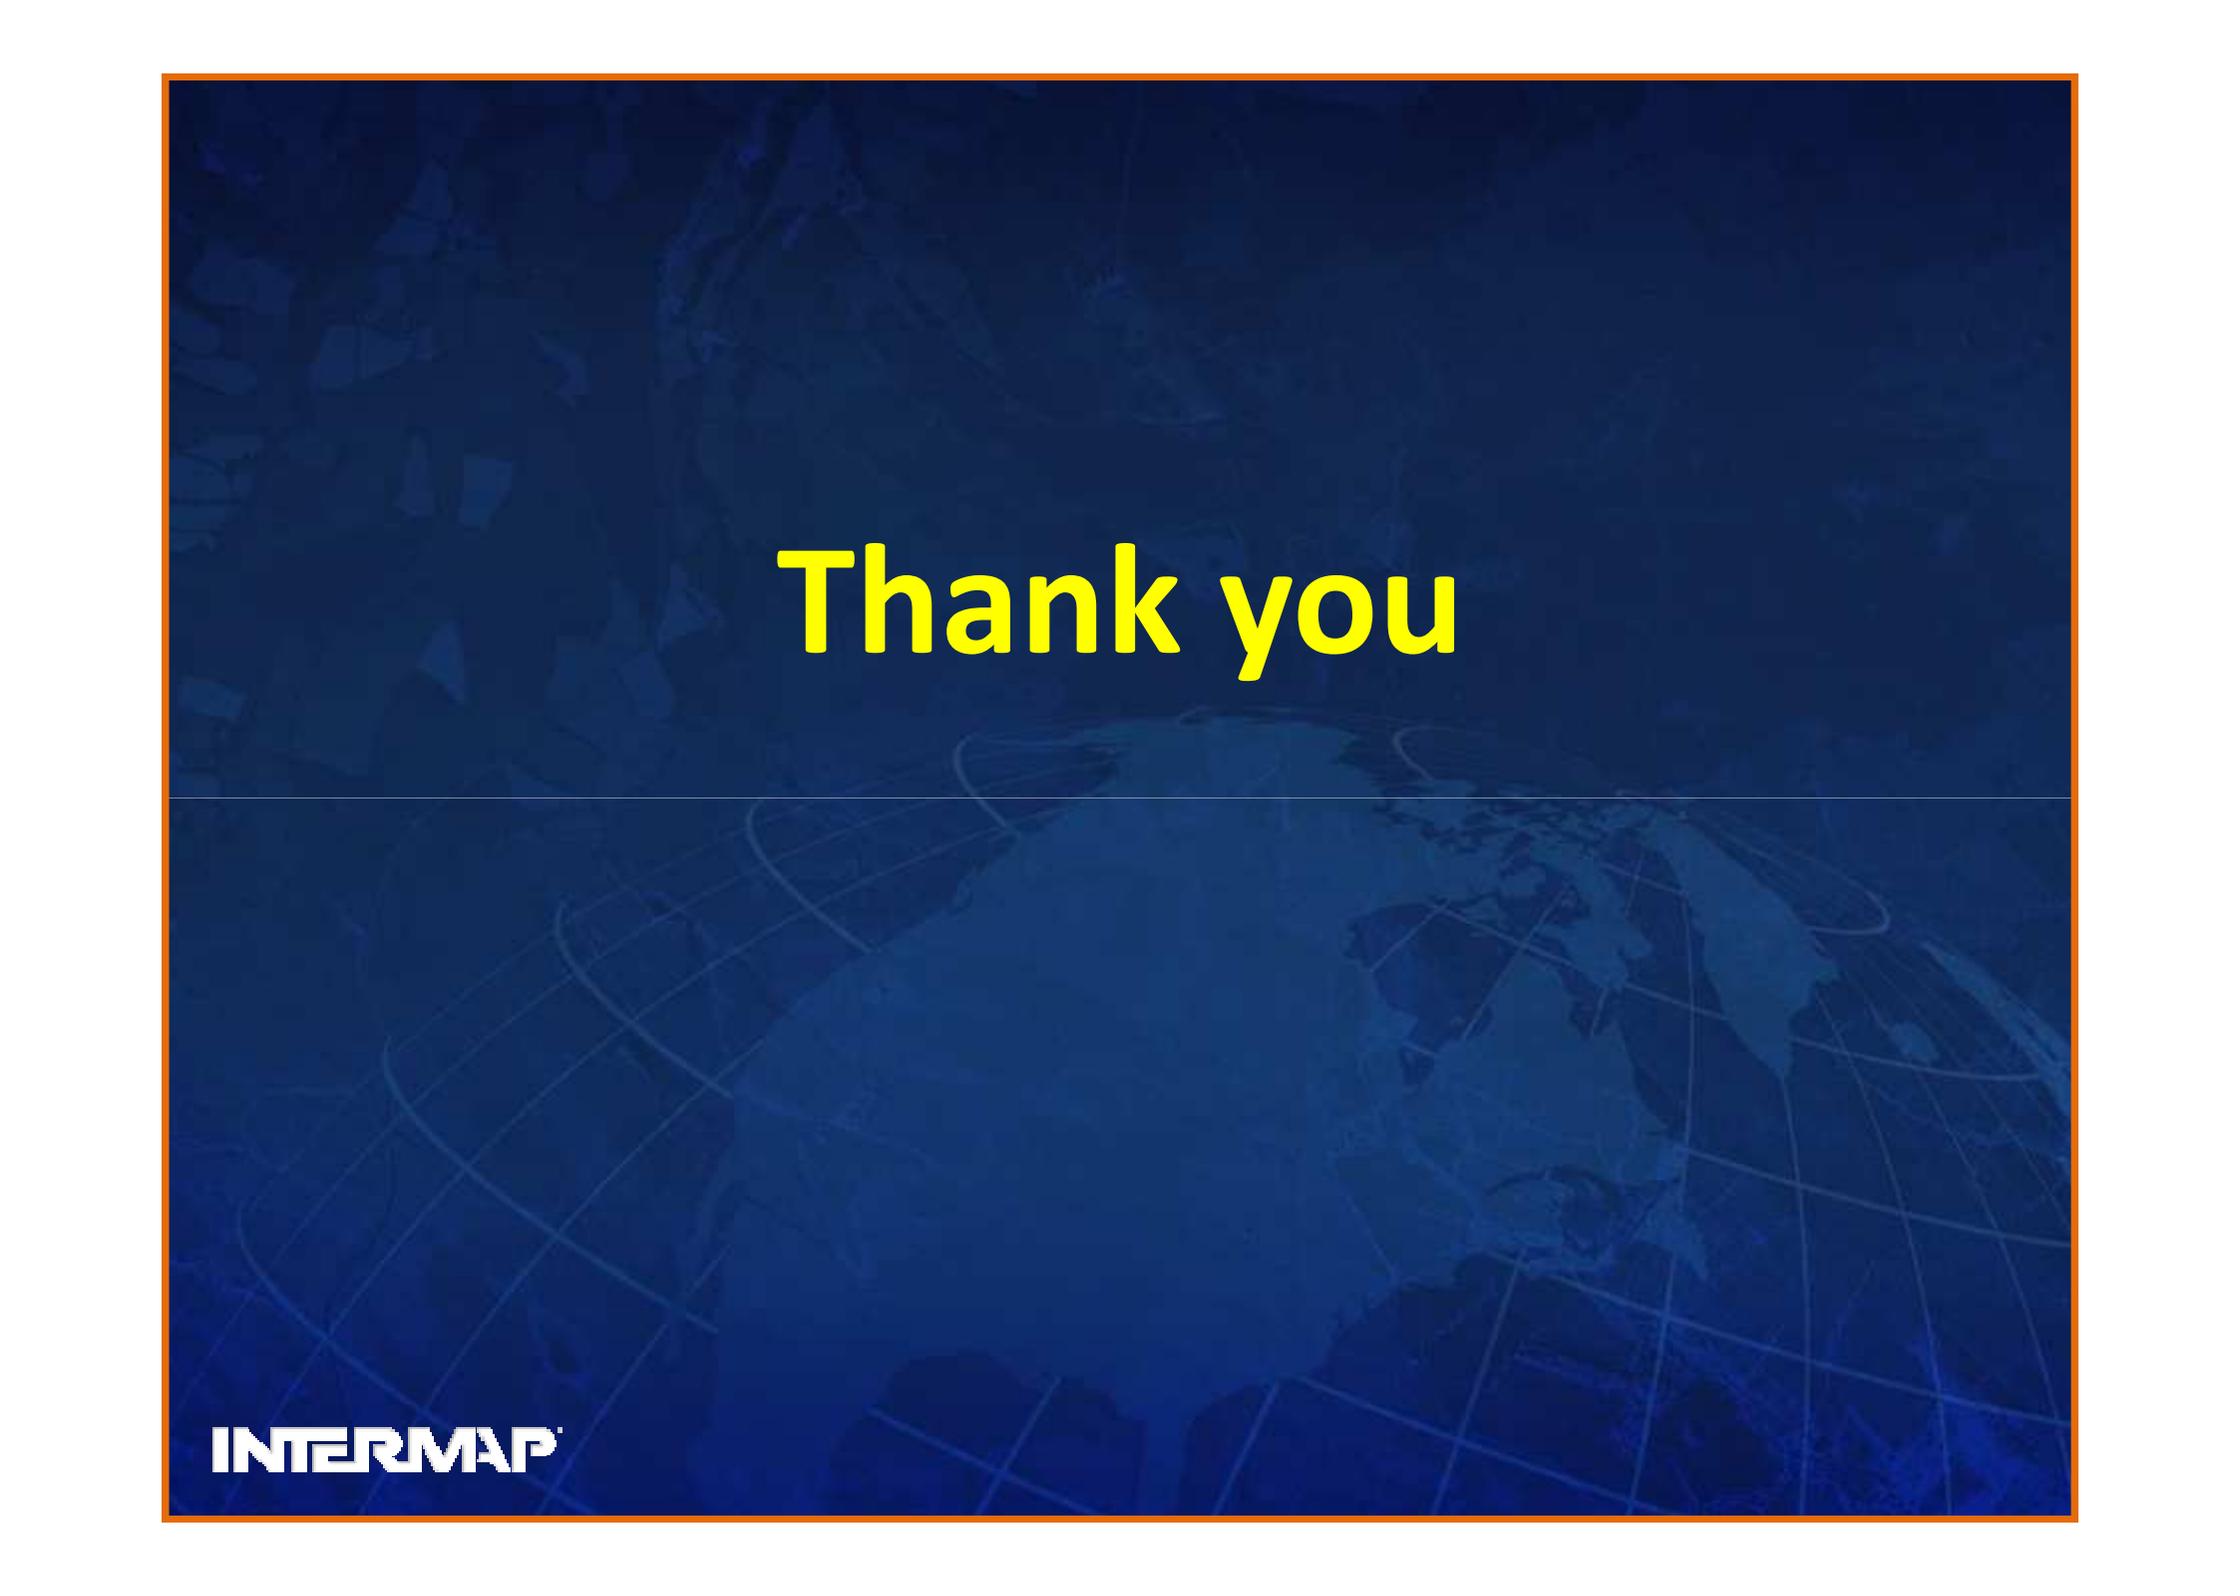

Identify where
flood levels
reach quickly
and identify who's
property will be
effected

Web-based risk management analytics
